DESCRIPTION

Weigh-in-motion (WIM) is a process of measuring the dynamic tire forces of a moving vehicle and estimating the corresponding tire loads of the static vehicle. This collection of lectures from the International Conference on Weigh-in-Motion details applications such as: collection of statistical traffic data, support of commercial vehicle enforcement, roadway and bridge cost allocation, and traffic management.

ABOUT THE AUTHOR

Bernard Jacob is the editor of *ICWIM 5, Proceedings of the International Conference on Heavy Vehicles: 5th International Conference on Weigh-in-Motion of Heavy Vehicles*, published by Wiley.

Eugene O'Brien is the editor of *ICWIM 5, Proceedings of the International Conference on Heavy Vehicles: 5th International Conference on Weigh-in-Motion of Heavy Vehicles*, published by Wiley.
